

SUMMARY

Aspiring Machine Learning Engineer with a strong foundation in Python, data structures, and real-world project development. Passionate about building intelligent systems and solving practical problems using AI and machine learning techniques.

WORK EXPERIENCE

AI Assistant (JARVIS) – Personal Project

- Developed a voice-controlled AI assistant inspired by JARVIS using Python
- Implemented speech recognition and text-to-speech for real-time interaction
- Integrated system automation features like opening apps, searching the web, and executing commands
- Designed modular and scalable code structure for future AI enhancements
- Improved understanding of NLP concepts and real-time system handling

LifeDrop – Blood Donation Network (Hackathon Project)

- Built a digital platform to connect blood donors, hospitals, and patients during emergencies
- Developed AI-based donor matching system for efficient and quick response
- Implemented real-time emergency alert system for blood requests
- Designed user-friendly dashboard for admin monitoring and request management
- Integrated location-based services for nearby blood camps and banks
- Focused on solving real-world healthcare challenges using technology
- Received a certificate of completion for successfully delivering project tasks

PROJECTS

Order Flow – Local AI Chatbot

- Developed a local AI chatbot using Ollama to run Large Language Models offline
- Built a system to interact with custom data (PDF-based chatbot concept)
- Ensured data privacy by processing queries locally without cloud dependency
- Designed prompt-based response system for accurate and context-aware answers
- Explored concepts of LLMs, embeddings, and retrieval-based systems

Spam Email Classifier

- Developed a machine learning model to classify emails as spam or not spam
- Used NLP techniques like text preprocessing and vectorization (TF-IDF)
- Trained models like Naive Bayes / Logistic Regression for classification
- Achieved high accuracy on test dataset
- Built a simple interface for real-time prediction

EDUCATION

Bachelor of Computer Applications

Allenhouse Institute of Technology
Kanpur | 2025–2028

SKILLS

- Problem Solving & Logical Thinking
- Team Collaboration & Communication
- Quick Learner & Adaptable
- Technical Support Handling
